#### ABSRACT

With the emergence of pandemic (Covid-19), face to face education has almost been put to a halt, and online education has gained significant importance. Academician rushed to compelte their syllabus and portion. No one bothered about the problem faced by the students and the academic performance. Since the academic performance was very poor study was undertaken to assess the online learning barriers among Undergraduate students. Thus the aim of this retrospective study was to identify the online learning barriers for the Academic performance. Aim of the study was to explore the barriers to online learning among I Year BSc Nursing students. Formal administrative permission was obtained and informed consent was taken from students. One hundred students completed a 20-question online survey. Eight barrier categories comprising 20 individual barriers were analyzed The barrier categories were Health problems, Academic Skills, Administrative/Instructor issues, Cost and Access to the Internet, Social Interactions, Technical Problems, Technical Skills, and Time and Support for Studies and obtained data was computed and analyzed by using statistical test. The Results of the study showed that the strongest barriers were- technical barrier (88%) and Health problems(86%), other barriers were cost and access to the internet (78%), Social Interaction(74%), Time and Support for studies(69.6%) Technical skills(65%) Academic skills(62%) and Administrative/instructor issues (58.8%) was perceived as least barrier

KEYWORDS: Barriers, Online Learning, Under graduates, Nursing students.

#### INTRODUCTION

Information and communication technologies have become a powerful force in transforming the education setting around the world. The pandemic has been an important factor in transferring traditional physica classrooms settings through adopting information and communication technologies and has accelerated the transformation. The period of Covid -19 pandemic has eerged as a sudden state of having limited opportunities. Face to face education has stopped in this period of a long time. The global spread of Covid-19 affected more than 850 million students all around the world, and it caused the suspension of face to face education, Different countries have proposed several solutions in order to maintain the education process during pandemic, Schools have had to change their curriculum and many countries supported the online education practice soonafter the pandemic. In otherwords, traditional education gave its way to online education practices.

#### **Data Collection Procedure**

Aim of the study was to explore the barriers to online learning among I Year BSc Nursing students. Formal administrative permission was obtained and informed consent was taken from students. One hundred students completed a 20-question online survey. Eight barrier categories comprising 20 individual barriers were analyzed The barrier categories were Health problems, Academic Skills, Administrative/Instructor issues, Cost and Access to the Internet, Social Interactions, Technical Problems, Technical Skills, and Time and Support for Studies and obtained data was computed and analyzed by using statistical test.

#### RESULTS

Participants personal variables are are presented in (Table 1). Among all the participants 78 (78%) were females and 22 (22%) were males. All participants 100 (100%) were in 19-21 age group and majority 65 (65%) of participants resides in Semi –Urban area and

majority of participants 74(74%) had no experience of attending online classes.

| Sl. No. | Personal variables           | Frequency | Percentage(%) |
|---------|------------------------------|-----------|---------------|
| 1.      | Age                          |           |               |
|         | 17-19                        |           |               |

| SL NO. | ITEMS  | YES  |    | NO |    |
|--------|--|------|----|----|----|
|        |  | f    | %  | f  | %  |
| Ι      | Health problems  | 86   |    |    |    |
| 1.     | Online classes usually lead tomorrow physical problems like fatigue, eye pain, and headache    | 94   | 94 | 6  | 6  |
| 2.     | Online classes create anxiety or stress due to less technical assistance                       | 78   | 78 | 22 | 22 |
| II     | Academic skills  | 62   |    |    |    |
| 3.     | Lack of previous online class exposure   | 62   | 62 | 38 | 38 |
| III    | Cost and Access to the Internet  | 78   |    |    |    |
| 4.     | Online classes are very costly in terms of internet recharge (68%)                             | 68   | 68 | 32 | 32 |
| 5.     | Online classes require strong internet access (88%)  | 88   | 88 | 12 | 12 |
| IV     | Technical problems   | 88   |    |    |    |
| 6      | Online classes are dependent on electricity and need<br>a proper setup (computer and earphone) | 91   | 91 | 9  | 9  |
| 7      | Online classes commonly have more interruptions  | 85   | 85 | 15 | 15 |
| VII    | Technical skills   | 65   |    |    |    |
| 8      | Online classes require advance technical skills  | 68   | 68 | 32 | 32 |
| 9      | Lack of previous online class exposure   | 62   | 62 | 38 | 38 |
| VIII   | Administrative/instructor issues   | 58.8 |    |    |    |

| 10  | Instruction given during online classes are not adequate | 56   | 56 | 44 | 44 |
|-----|--|------|----|----|----|
| 11  | Online classes are lacked in motivation                  | 49   | 49 | 51 | 51 |
| 12  | Online classes are lacked in student's evaluation        | 58   | 58 | 42 | 42 |
| 13  | Online classes are overburdened                          | 59   | 59 | 41 | 41 |
| 14  | Online classes are lacked in control over the group      | 72   | 72 | 28 | 28 |
| XI  | Social Interactions                                      | 74   |    |    |    |
| 15  | Online classes are lacked in student-teacher interaction | 65   | 65 | 35 | 35 |
| 16  | Online classes are lacked in discussion among students   | 83   | 83 | 17 | 17 |
| Х   | Time and Support for studies                             | 69.6 |    |    |    |
| 17. | Did you feel distraction at home during online classes   | 81   | 81 | 19 | 19 |
| 18  | Online class hour duration are longer                    | 65   | 65 | 35 | 35 |
| 19  | Online classes per day are more(67%)                     | 67   | 67 | 33 | 33 |
| 20  | Online classes give less time to learn                   | 62   | 62 | 38 | 38 |
| 21  | Online assignments are helpful                           | 73   | 73 | 28 | 28 |

From the table 2 and Fig 1 It is evident that the Strongest barriers which were perceived by students were- technical barrier (88%) and Health problems(86%), cost and access to the internet (78%), Social Interaction(74%), Time and Support for studies(69.6%) Technical skills(65%) Academic skills(62%) and

Administrative/instructor issues (58.8%) was percieved as least barrier.

## DISCUSSION

Advances in modern computer technology have driven the development of distance education. In addition, the COVID-19 pandemic, a public health crisis of worldwide

I

importance during the outbreak, has made distance education through the E-learning system an urgent and irreplaceable requirement. Despite the current pandemic that is hindering education worldwide, online learning based on Internet services has become available and universal, facilitating the learning system. Colleges and universities use online resources to continue their educational journey through software applications such as Zoom, Microsoft Teams Google Meet, Cisco, Webex and Teach Meet etc. As a result, the effectiveness of Elearning and students' online learning outcomes become a matter of concern for universities in particular and the society in general. In fact, there has been a significant increase in research on factors affecting students' online learning outcomes.

The new technologies are providing a variety of effective learning environment. However, many adult students still prefer traditional, academic settings and do not want to take online or hybrid classes and reason for not preferring to online classes students faced so many practical problems related technology, health consequences, not having face to face interaction.etc.

## CONCLUSION

During the pandemic period where the social interaction was limited the whole world it turned towards the online education in completion of their portions and ignoring the consequences and efficacy of online teaching. Some of the studies evidenced the need of analysis of online teaching programme and its effectiveness. Thus with this retrospective study we can conclude that Traditional class room teaching is effective compare to online learning and online learning is only alternative for class room learning and its not the substitute.
